

1. Differentiation of diverse hazy metal parts

Diverse hazy metal components should be differentiated. For this purpose, a haze sensor type **GLAST-85-30°/30°-DIF-1.0/1.0** is used. At this, the sensor is arranged at a distance of around 85 mm to the object. Furthermore, the detecting range is approximately 20 mm in length. The metal parts can be proper haze differentiated as shown in the screen shots.
