1. Color measurement of lacquered aluminum plates

The color of lacquered aluminum plates should be measured. For this purpose, a color sensor type SPECTRO-3-28-45°/0°-MSM-ANA-DL is used. At this, the distance from the sensor to the object is approximately 28mm and the detecting range at this distance is around 12mm in diameter. The color of the aluminum plates can be proper measured as shown in the screen shots.
