

1. Presence control of a transparent plastic film

The presence of a transparent plastic film should be controlled. For this purpose a laser trough beam sensor type **L-LAS-TB-100-T-CL + L-LAS-TB-100-R-CL** is used. At this, the distance between the transmitter and the receiver is approximately 150mm. The transparent plastic film can be properly detected as shown in the screen shots.
