

### 1. Color measurement of orange fabrics

The color of orange – black patterned textiles should be measured. For this purpose a color measurement sensor type **SPECTRO-3-28-45°/0°-MSM-ANA-VIS** is used. At this, the distance from the sensor to the object is 28mm and the detecting range at this distance is around 15mm in diameter. The color of the orange-black patterned fabric can be properly measured as shown in the screen shots.
