

1. Presence control of a semitransparent plastic film on a metal sheet

A semitransparent light blue plastic film should be detected on a metal sheet. For this purpose a color sensor type **SPECTRO-3-DIL-SLE** will be used. At this, the distance of the sensor to the object is approximately 30mm and the detecting range at this distance is around 16 mm in diameter. The presence of the semitransparent film can be proper detected as shown in the screen shots.
