## N°686 SPECTRO-3 series

### 1. Color separation of metal parts

Metal parts should be separated depending on the color. For this purpose, a color sensor type **SPECTRO-3-30-POL-ANA** is used. At this, the distance from the sensor to the object is approximately 30mm and the detecting range is around 20mm in diameter. The metal parts can be proper separated as shown in the screen shots.
