

SPECTRO Series

► SPECTRO-3-FIO-MSM-ANA-DL

- Big working range: typ. 1 mm ... 500 mm (depends on fiber optics and optical frontend used)
- Various fiber optics to choose from
- L*a*b*, L*C*h*, L*u*v*, L*u'v' and xyY evaluation (CIE standard)
- Up to 3 colors can be stored
- RS232 interface (USB or Ethernet adapter available)
- D65 similar LED light source, AC-, DC-operation or OFF for luminous objects can be switched
- Color measurement (color, contrast, and gray scale detection)
- Insensitive to outside light (in AC-operation)
- Scan frequency max. 90 kHz (in DC- or OFF-operation)
- Switching frequency typ. 60 kHz
- 3 analog outputs to output color values to PLC
- 2 digital outputs to output taught colors
- TEACH via PC or PLC (external input)
- Various evaluation algorithms can be activated
- "BEST HIT" mode ("human color assessment")
- Averaging can be activated (from 1 up to over 32000 values)
- Parameterizable via Windows® software, scope function
- Temperature compensated
- Color measurement of luminous objects (LEDs, halogen lamps, displays, ...)
- 3-color filter detector (true color detector: "human color perception")
- Transmitted light evaluation

Design

Product name:

SPECTRO-3-FIO-MSM-ANA-DL

(incl. Windows® PC software
SPECTRO3-MSM-ANA-Scope)

Suitable fiber optics:

(please order separately)

D-S-A2.0-(2.5)-1200-67°

D-S-A3.0-(3.0)-1200-67°

Accessories: (p. 8-12)

Fiber optics Optical frontends

Technical Data

| Type | SPECTRO-3-FIO-MSM-ANA-DL |
|-----------------------------------|---|
| Voltage supply | +24VDC ($\pm 10\%$), reverse polarity protected, overcurrent protected |
| Current consumption | < 160 mA |
| Max. switching current | 100 mA, short circuit proof |
| Input digital (1x) | IN0 (Pin 3), digital (0V/+24V) |
| Outputs digital (2x) | OUT0, OUT1 (Pin 4 and 5): digital (0V/+24V), npn-/pnp-able (bright-/dark-switching, can be switched) |
| Outputs analog (3x) | OUT2, OUT3, OUT4 (Pin 6, 7, and 8): 0...+10V or 4...20mA (xyY, a*b*L*; u*v*L*, u'v'L*, C*h*L*, XYZ) |
| Interface | RS232 (an external USB and ETHERNET converter is available) |
| Pulse lengthening | 0 ... 100 ms, adjustable via PC software |
| Averaging | max. 32768 values, adjustable via PC software |
| Scan frequency | LED operation, can be switched via PC software: AC operation: max. 25 kHz (depends on parameterization) DC and OFF operation: max. 90 kHz (depends on parameterization) |
| Switching frequency | typ. 60 kHz |
| Analog band width | max. 90 kHz (-3dB) |
| Transmitter (light source) | LED with spectral characteristics similar to D65 |
| Transmitter control | can be switched via PC software: AC operation (LED MODE-AC), DC operation (LED MODE-DC), OFF operation (LED MODE-OFF) |
| Object distance (measuring range) | in transmitted light operation: typ. 10 mm ... 500 mm (depends on fiber optics and attachment optics) |
| Receiver | 3-color filter detector (TRUE COLOR detector, "human color perception"), color filter curves acc. to CIE 1931 |
| Receiver gain setting | 8 steps (AMP1 ... AMP8), adjustable via PC software |
| Ambient light | max. 5000 Lux |
| Size of light spot | depends on fiber optics and optacam frontend used |
| Reproducibility | in the X, Y color range each 1 digit at 12-bit A/D conversion |
| Temperature drift X,Y | $\Delta X/\Delta T$; $\Delta Y/\Delta T$ typ. 0,2 digits/°C (< 0,01% / °C) |
| Measurement accuracy | typ. $\Delta E = 0.3$ |
| Resolution | $\Delta E \geq 0.01$ in case of color space L*u'v': $\Delta u'v' = 0.001$ |
| Color space | CIE L*a*b*, CIE L*C*h*, CIE L*u*v*, CIE L'u'v', and CIE xyY |
| Color memory capacity | non-volatile EEPROM with parameter sets for max. 3 colors |
| Housing dimensions | LxWxH approx. 65 mm x 65 mm x 36 mm (incl. fiber optics adapter M18x1, without flange connectors) |
| Housing material | aluminum, anodized in black |
| Enclosure rating | IP64 |
| Connecting cables | to PLC: cab-las8/SPS or cab-las8/SPS-w to PC/RS232 interface: cab-las4/PC or cab-las4/PC-w to PC/USB interface: cab-4/USB or cab-4/USB-w to PC/Ethernet interface: cab-4/ETH |
| Type of connector | connection to PLC: 8-pole fem. connector (Binder 712), connection to PC: 4-pole fem. connector (Binder 707) |
| Operating temp. range | -20°C ... +55°C |
| Storage temperature range | -20°C ... +85°C |
| EMC test acc. to | DIN EN 60947-5-2 |

Dimensions

All dimensions in mm

Connector Assignment
Connection to PLC:**8-pole fem. connector Binder series 712**

| Pin: | Color: | Assignment: |
|------|--------|--|
| 1 | white | GND (0V) |
| 2 | brown | +24VDC ($\pm 10\%$) |
| 3 | green | IN0 (Digital 0: 0 ... 1V, Digital 1: +Ub - 10%) |
| 4 | yellow | OUT0 (Digital 0: 0 ... 1V, Digital 1: +Ub - 10%) |
| 5 | grey | OUT1 (Digital 0: 0 ... 1V, Digital 1: +Ub - 10%) |
| 6 | pink | OUT2 X, x, a*, u*, u' or C* (Analog: 0 ... +10V or 4 ... 20mA) |
| 7 | blue | OUT3 Y, y, b*, v*, v' or h* (Analog: 0 ... +10V or 4 ... 20mA) |
| 8 | red | OUT4 Z, Y or L* (Analog: 0 ... +10V or 4 ... 20mA) |

Connecting cable:

cab-las8/SPS-(length)
 cab-las8/SPS-w-(length)
 (standard length 2m)

**Connection to PC:****4-pole fem. connector Binder Series 707**

| Pin: | Assignment: |
|------|-------------------|
| 1 | +24VDC (+Ub, OUT) |
| 2 | GND (0V) |
| 3 | RxD |
| 4 | TxD |

Connection via RS232 interface at the PC:

Connecting cable:
 cab-las4/PC-(length)
 cab-las4/PC-w-(length) (angle type 90°)
 (standard length 2m)

alternative:**Connection via USB interface at the PC:**

Connecting cable (incl. driver software):
 cab-4/USB-(length)
 cab-4/USB-w-(length) (angle type 90°)
 (standard length 2m)

alternative:**Connection to local network via Ethernet bus:**

Adapter (incl. software „SensorFinder“):
 cab-4/ETH-500
 (standard length 0.5m)

Optional: External CAT5 cable, e.g.
 cab-eth/M12D-RJ45-flx-(length)

Measuring principle of color sensors of SPECTRO-3-...-MSM-ANA Series:

The SPECTRO-3-MSM-ANA color sensor provides highly flexible signal acquisition. For example, the sensor can be operated in alternating-light mode (AC mode), which makes the sensor insensitive to extraneous light. It also can be set to constant-light mode (DC mode), which makes the sensor extremely fast. With the stepless adjustment of the integrated light source as well as the selectable gain of the receiver signal and an INTEGRAL function the sensor can be set to almost any surface or any "self-luminous object".

When the integrated light source of the SPECTRO-3-MSM-ANA color sensor is activated, the sensor detects the radiation that is diffusely reflected from the object. As a light source the SPECTRO-3-MSM-ANA color sensor uses LEDs (in case of color sensor type -VISUV additional UV LEDs) with adjustable transmitter power. An integrated 3-fold receiver for the red, green, and blue content of the light that is reflected from the object, or the light that is emitted by a "self-luminous object", is used as a receiver.

The SPECTRO-3-MSM-ANA color sensor can be "taught" up to 3 colors. For each of these taught colors it is possible to set tolerances. Evaluation of the taught colors is performed either with the "FIRST HIT" or with the "BEST HIT" mode. With "FIRST HIT" the first hit in the teach table is output, and with "BEST HIT" the best hit in the teach table is output. Raw data are represented with 12 bit resolution.

Color detection either operates continuously or is started through an external PLC trigger signal. The respective detected color either is provided as a binary code at the 2 digital outputs or can be sent directly to the outputs, if only up to 2 colors are to be detected.

In addition to the 2 digital outputs there also are 3 analog outputs that either provide the red, green, and blue components or the calculated color coordinates in values of 0...+10V or 4...20mA.

Through input IN0 (green wire of the cab-las8/SPS cable) the color sensor can be taught up to 3 colors. For this purpose the corresponding parameter mode must be set with the software.

Parameters and measurement values can be exchanged between a PC and the SPECTRO-3-MSM-ANA color sensor through the serial RS232 interface. All the parameters for color detection also can be saved to the non-volatile EEPROM of the SPECTRO-3-MSM-ANA color sensor through this serial RS232 interface. When parameterisation is finished, the color sensor continues to operate with the current parameters in STAND-ALONE mode without a PC.

Possible firmware updates can be easily performed through the RS232 interface, even with the sensor system in installed condition. (a firmware update is performed via the software „FirmwareLoader“).

The sensors of the SPECTRO-3-MSM-ANA series can be calibrated. Calibration can be performed to any surface with known color coordinates. A ColorChecker™ table is available as an alternative. This table has 24 color fields according to the CIE STANDARD that can be used for calibration.

Furthermore, input IN0 can be used for performing white light balancing.

Parameterization

Windows® user interface:

(The current software version is available for download on our website.)

The color sensor is parameterized under Windows® with the SPECTRO3-MSM-ANA-Scope software. The Windows® user interface facilitates the teach-in process at the color sensor and supports the operator in the task of adjustment and commissioning of the color sensor.

The RS232 interface (tab PARA1) is used for setting parameters such as e.g.:

- POWER MODE (SET DP): Light power of the LED (Set Double Parameter)
- LED MODE: Triggering of the internal light source (AC, DC)
- GAIN: Used for setting the gain of the receiver (AMP1 ... AMP8)
- AVERAGE: Averaging over a maximum of 32768 values. This function field is used for adjusting the number of scanning values (measurement values) over which the raw signal measured at the receiver is averaged. A higher AVERAGE default value reduces noise of the raw signals at the receiver unit and there will be a decrease of the maximal available switching frequency of the sensor
- INTEGRAL: This function field is used to set the number of scan values (measurement values) over which the raw signal measured at the receiver is summed up. This integral function allows the reliable detection even of extremely weak signals
- C SPACE: Selection of a color space ((L*a*b*, L*C*h*, L*u*v*, L*u'v', or xyY) for the calculation of the color stimulus specification
- ANALOG OUTMODE: Function to determine the signals that the sensor provides at its analog outputs (OUT2, OUT3, OUT4) (OFF, XYZ, COLOR SPACE, CS REF)
- EVALUATION MODE: BEST HIT or FIRST HIT
- TRIGGER: Continuous or external or self trigger (CONT, EXT1, EXT2, TRANS)
- EXTEACH: In all the evaluation modes teaching of a color can be performed externally through IN0.
- INTLIM: Minimum intensity required for color evaluation
- MAXCOL-No.: Number of colors to be checked
- DIGITAL OUTMODE: Control of the two digital outputs (OUT0, OUT1)
- Tab TEACH: Opens a window where you can teach colors to the TEACH TABLE
- Tab CALIB: Selection of calibration mode (FCAL = factory calibration or UCAL = user calibration).
- Tab SCOPE: Visualises an oscilloscope
- Tab GEN: Displays the current temperature value TEMP in the sensor housing
- Tab REC: Data recorder

Firmware Update

Firmware update by means of the software „FirmwareLoader“:

The software „Firmware Loader“ allows the user to perform an automatic firmware update. The update will be carried out through the RS232 interface.

An initialisation file (xxx.ini) and a firmware file (xxx.elf.S) are required for performing a firmware update. These files can be obtained from your supplier. In some cases an additional firmware file for the program memory (xxx.elf.p.S) is also needed, and this file will be automatically provided together with the other two files.
